

CASE STUDY

Creation of a future proof Intranet business solution.

Provision of a business critical information management and remote working repository.

INDUSTRY

Charity and Education

NEED

EACT required an internal platform to:

1. Enable document collaboration
2. Information Management and distribution
3. Project Management framework

BUSINESS CHALLENGE

Brantas worked within a very aggressive timescale to understand the key needs, culture and ethos of EACT. EACT were committed to developing their platform using Microsoft SharePoint technologies.

SOLUTION

We enhanced SharePoint's existing functionality and interfaces using bespoke and individualistic styling to create a fully branded intranet business solution which later became known as i-Link. We had to guide and consult with EACT key resources to evolve their requirements into a working solution. We created a future-proof modular platform that can be extended and

upgraded with minimal interruption to business critical activities. This will enable i-Link to grow and allow EACT to focus on their core objectives of transforming under-performing schools whilst enhancing the education experiences of both students and teachers.

RESULTS

- Fully personalised intranet platform.
- Remote working capabilities.
- Business continuity.
- Office transformation.

CORE TECHNOLOGIES

Microsoft Office SharePoint Server 2007
.NET technologies
AJAX framework
SQL Server
XHTML / CSS

“Brantas brought their expertise into our existing team and helped us fast-track our intranet project. The result was exactly as we expected, on-budget, on-time and packed with the features that we really needed to deliver real benefits to our staff. Our intranet looks great and is easy to use and as usual the team at Brantas were a pleasure to work with.”

Chris Meaney
Director of ICT, EACT
